

Field Flatteners 130GTX & 130GT with 3.5" Focuser CMOS & CCD System Diagram

* For cameras with different backfocus spacing distances, you must provide your own adapter.

Filter thickness: Add 1/3 of the filter thickness to the adapter length. The distance must be the optical distance, not the mechanical distance.

Warning: Take extra care of the optics when backfocus spacers (EXT327.17.0 or EXT327-221) are removed.
